Forum

For many multi-layer multi-material packaging and many types of plastic, the material's properties or missing infrastructure prevents them from being recycled into new food packaging.

2/4
→

For single-material plastic and paper products, the addition of virgin material and special measures are often needed to guarantee function and safety of recycled food packaging.

Fact bite #3

Recycling of food contact materials

For inert materials like metal and glass, material properties and chemical safety of recycled food packaging remain high after repeated cycles.
